diVa® is a quick, convenient, in-office, minimal downtime solution for women's gynecological and genitourinary/urology health.

Every woman is unique and so are her gynecological health needs. diVa technology allows your clinician to customize the treatment based on your symptoms.

DIVA TECHNOLOGY

Only diVa utilizes Hybrid Fractional Laser (HFL) technology. diVa delivers two laser wavelengths for a synergistic effect. diVa is an innovative option to improve the quality of vaginal tissue.

- ✓ Fast 3-5 minute procedure
- ✓ Delivered at your comfort level
- ✓ Customizable for your specific desired results

FREQUENTLY ASKED QUESTIONS

WHAT IS diVa?

diVa is a popular in-office procedure that uses laser technology for gynecological and genitourinary/urology health

treatment, your practitioner may recommend a personalized post treatment regimen and includes avoiding sexual intercourse or tampon use for a longer period of time.

WHAT WOULD I EXPERIENCE DURING diVa?

diVa requires a disposable dilator (strengthened quartz dilator) that remains stationary during the procedure. This thoughtful design allows for comfort while permitting diVa's precision laser beam to be positioned accurately within the stationary dilator. It is a quick 3-5 minute procedure. Patients will experience a slight pressure sensation. Topical anesthetic is used to ensure comfort.

WHAT CAN I EXPECT IN THE FIRST 48 HOURS FOLLOWING diVa?

Patients may return to their daily routine. You may experience minimal discharge, spotting, or discomfort. Depending on your level of
